

All About LED

LED stands for Light Emitting Diode, which is a tiny computer chip encased in glass. Each LED emits a wavelength of light that provides unique therapeutic benefits. LightStim for Acne is equipped with 60 medical-grade LEDs that utilize light stimulation within the blue and red spectrums.

Epidermis
(outermost layers of skin)

Dermis
(inner layers of skin)

1. Epidermis

Skin renewal and protection from bacteria

2. Dermis

Controls oil production and delivers nutrients and oxygen to skin cells

3. Hypodermis

Cushion, insulation, and connection

Results in Just Minutes a Day

TREATMENT

2 Wavelengths Are Better Than 1

Unlike some LED devices, LightStim for Acne uses two wavelengths of light to help kill acne-causing bacteria while soothing the skin. It treats acne at its source while calming skin and reducing redness.

Who We Are

For over 25 years, LightStim has led the way in LED light therapy. We are trusted by tens of thousands of professionals and over a million consumers for our commitment to quality, safety, and results.

Built to last a lifetime, this device is proudly manufactured in the USA at LightStim's FDA-certified, medical-grade facility.

LightStim For Wrinkles

Take control of the aging experience by reducing fine lines and wrinkles, improving your skin's texture and overall health.

LightStim SheetMasque

Gentle and nourishing, this ultra-hydrating masque quickly restores your skin, giving you a healthy, radiant complexion.

Clear-Skin Confidence

Stop breakouts in their tracks by eliminating acne at its source with technology that goes more than skin deep.

Clinical Trial Results

100%

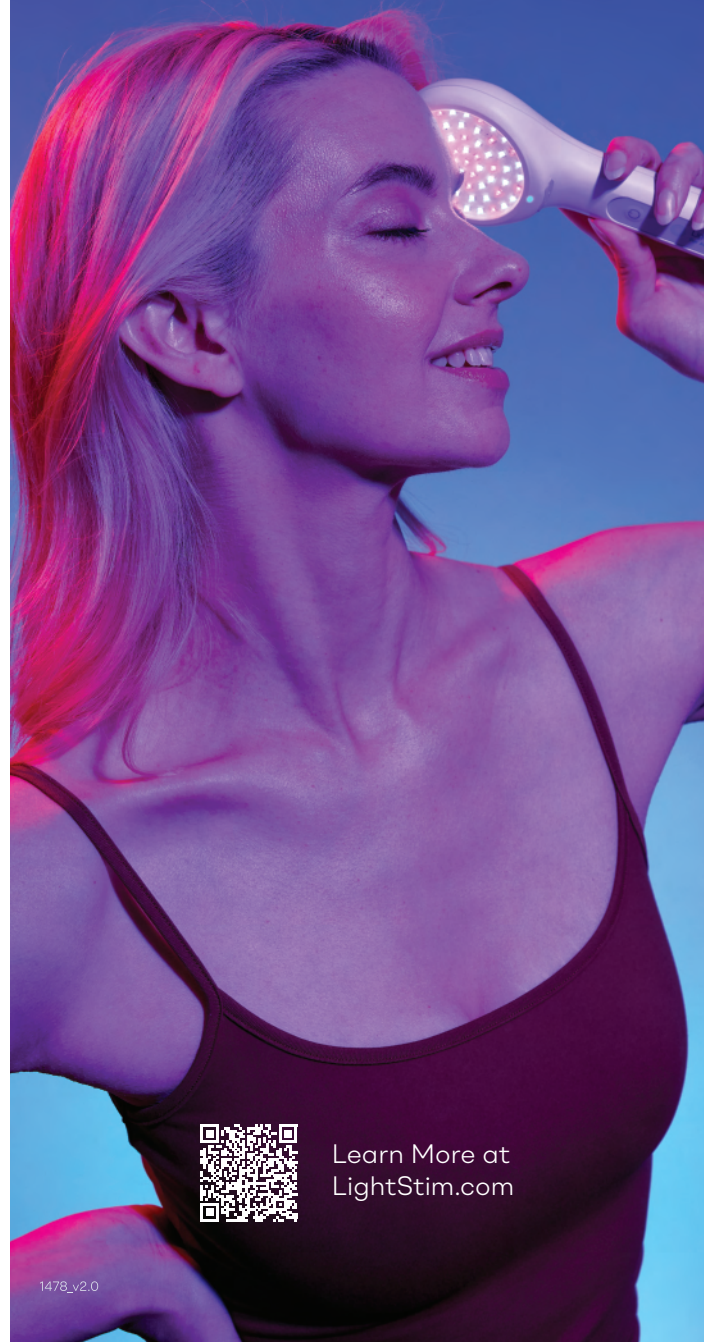

Physicians observed visible improvement in 100% of participants within 2-4 weeks.

LightStim Technology

LightStim for Acne treats mild to moderate acne using LED light therapy. This technology delivers light energy to your body to stimulate cellular function, similar to the way plants absorb sunlight.
